

ApexPlanet Data Analytics Internship

Final Bussiness Report

Prepared By

Mokshagna

Data Analytics Intern
ApexPlanet Software Pvt.Ltd

June 2026 - July 2026

Project :

**Sample Superstore Bussiness
Analytics**

Executive Summary

Project Overview

The objective of this internship project was to perform end-to-end data analytics on the Sample Superstore dataset. The project involved data cleaning, exploratory data analysis (EDA), SQL-based business analysis, interactive visualizations, Power BI dashboard development, statistical analysis, customer segmentation using K-Means clustering, and predictive modeling using Linear Regression to generate meaningful business insights

Dateset Information

Dataset	Sample Superstore
Records	1000
Features	21 Columns
Target Variable	Profit
Domain	Retail Sales

Tools and Information

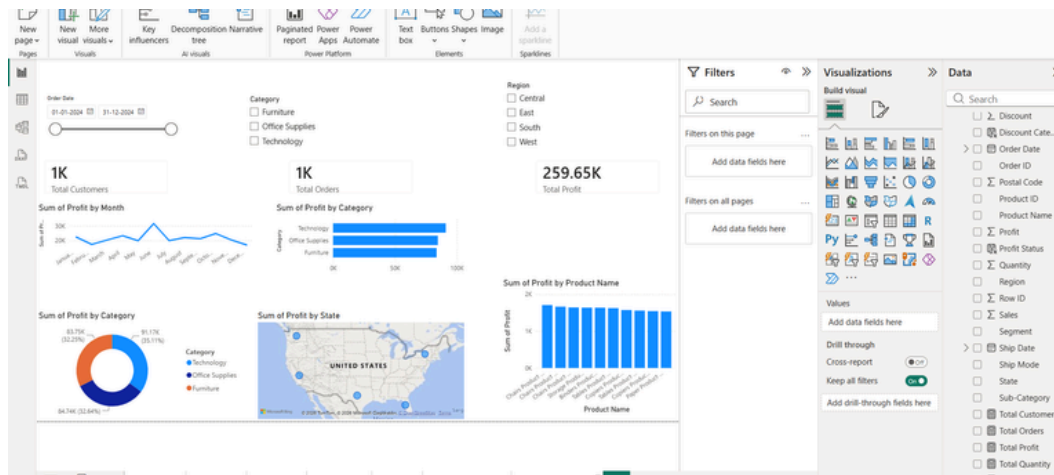

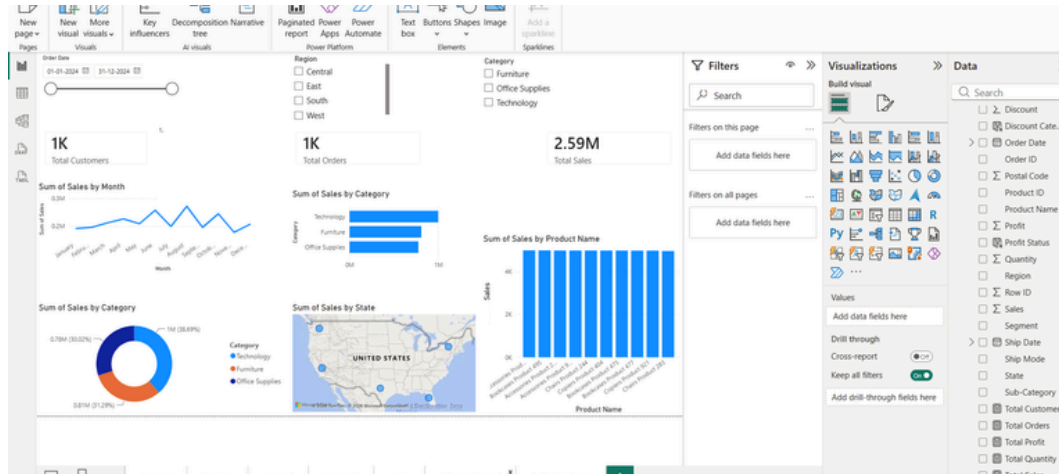

- Python
- Pandas
- Numpy
- Matplotlib
- Seaborn
- Plotly
- SQL
- Power BI
- Scikit-learn
- Git & GitHub

Objectives

- Clean and preprocess the dataset
- Perform exploratory data analysis (EDA)
- Execute SQL-based business analysis
- Build interactive Power BI dashboards
- Perform customer segmentation using K-Means clustering.
- Develop a Linear Regression model for profit prediction
- Generate business insights and business recommendations

Dashboard & Data Visualizations

Interactive Power BI Dashboard

The Power BI dashboard provides an interactive overview of the Sample Superstore business performance. It displays key performance indicators including Total Sales, Total Profit, and Total Orders, along with category-wise sales, monthly sales trends, top-selling products, and geographical sales distribution. Interactive filters for Region and Category enable users to explore business performance dynamically and support data-driven decision-making.

Business Insights & Recommendations

Top 5 Business Insights

- . Technology generated the highest sales and profit among all product categories.
- . Sales and profit varied across months, indicating seasonal business trends.
- . A small number of products contributed the majority of total sales and profit.
- . Certain states consistently achieved higher sales and profitability than others.
- . Furniture and Office Supplies offer opportunities to improve overall profitability.

Business Recommendations

Recommendation 1

Increase investment in the Technology category, as it generates the highest sales among all product categories.

Recommendation 2

Focus marketing and inventory planning on top-performing states and products to maximize revenue growth.

Recommendation 3

Focus on high-profit states and products while reviewing low-profit regions to maximize overall business performance.
